

HYPHERPRO

STEERING DAMPER MOUNTING KIT

for

Suzuki TL1000 S
Model '97>

MK-SU10-T008 PART LIST

SD stroke 75	1	M6x45	1
Tube Clamp Type 3	1	M6x50	1
O-Ring	2	M8x30 Button head	1
Fork Bracket (MP-FOMK30)	1	Washer M6 ϕ 12	1
Tank Bracket 1 (MP-TAMK40)	1	Washer M6 ϕ 18	2
Tank Bracket 2 (MP-TAMK47-2)	1	Washer M8 ϕ 21 h4	1
M6x16	2	-	-
M6x25 Low head	1	-	-

ALL IDEAS, DESIGNS ARRANGEMENTS AND PLANS INDICATED OR REPRESENTED BY THIS DRAWING ARE OWNED BY HYPERPRO AND WERE CREATED, EVOLVED AND DEVELOPED FOR USE ON AND IN CONNECTION WITH THE SPECIFIC PROJECT. NONE SUCH IDEAS, DESIGNS, ARRANGEMENTS OR PLANS SHALL BE USED BY OR DISCLOSED TO ANY PERSON, FIRM OR CORPORATION FOR ANY PURPOSE WHATSOEVER WITHOUT THE WRITTEN PERMISSION OF HYPERPRO.

Remove original steering damper and mounting brackets

* TORQUES

A: 5-9Nm / 44-80Lbs.In / 4.0-6.4Lbs.Ft
 B: 14-17Nm / 124-150Lbs.In / 10.3-12.5Lbs.Ft
 C: 6Nm / 53Lbs.In / 4.4Lbs.Ft

D: 8Nm / 70Lbs.In / 5.9Lbs.Ft
 E: 55Nm / 486Lbs.In / 40Lbs.Ft
 F: Factory torque (see owners manual)

HYPERPRO

STEERING DAMPER MOUNTING KIT

for

**Suzuki TL1000 S
Model '97>**

MK-SU10-T008 INSTALLATION INSTRUCTIONS

In general:

HYPERPRO can not be held responsible in any way for any form of physical, material, financial or other damage arising from use, assembly or overhaul of HYPERPRO products. HYPERPRO reserves the right to make changes without prior notice.

This product is ONLY TO BE INSTALLED BY A PROFESSIONAL MECHANIC.

This product is only to be used for the motorcycle brand, model and year stated specifically on top of the pages of this manual.

DO NOT attempt to install this product on motorcycles from any different brand, model and/or year than stated on the pages of this manual.

DO NOT use this kit for cars, boats, jet-skies, snowmobiles, ATV's, aircraft, hovercrafts or any other vehicle and/or purpose.

HYPERPRO steering dampers are FOR RACE USE ONLY, NOT FOR HIGHWAY USE!

Before installation:

- Please read the entire manual carefully before starting the installation!
- Check if you have all the tools required. Good tools are a must.
- Protect your bike at the most important places in and around the work area (e.g. tank, fairing, frame, etc.), with a blanket, towel or similar.

During installation:

- Check all operations and parts carefully before, during and after performing each step.
- Clean all surfaces that are required for fitting parts together or for applying self adhesives or loctite, thoroughly with contact cleaner or another degreaser, unless otherwise stated.
- Be careful not to damage or scratch any part of your bike.
- ALWAYS work relaxed and concentrated!! It is very easy to damage something or make a mistake.

After installation:

- Check and make sure that there is no contact between any part of the steering damper kit and any part of the motorcycle. The kit should not hit anything. Steering movement should not be limited by the steering damper. If the steering movement is limited, adjust the position of the tube in the clamp until steering movement is normal again. Do not forget to tighten the clamp bolt again!
- ALWAYS check the steering movement and feeling before each ride!
- FIRST RIDES: Start with the damper turned fully open (turn adjuster knob fully counter clockwise).
- Start adjusting in between rides with steps of MAX. 2 CLICKS (0.25 TURN) EACH TIME, until the damper is working satisfactory for your riding style.
- NEVER USE MAXIMUM SETTING, ALWAYS OPEN AT LEAST 2 CLICKS (0.25 TURN).
- WARNING ! DAMPER HAS AN ACTIVE / SPEEDSENSITIVE DAMPING SYSTEM;
 - Steering with NORMAL MOVEMENT should be FREE !!
 - Steering with FAST MOVEMENT should be CONTROLLED BY DAMPER !!
- HYPERPRO uses a special seal to reduce friction. The seal uses an oil film to work properly. It is normal that some oil can appear on the pistonrod.
- Damper works with oil: DAMPING CAN BE HARDER AT LOWER TEMPERATURES!

Step 1: REMOVE THE ORIGINAL STEERING DAMPER AND BRACKETS FROM THE BIKE !!!

Step 2: installing the tank bracket assembly

Install the tank bracket using:

- Tank bracket part 1 (1)
- 2x Washer M6 \varnothing 18 (2)
- Bolt M6x45 (3)
- Bolt M6x50 (4)
- Tank bracket part 2 (5)
- 2x Bolt M6x16 (6)

Remove the 2 standard M6 bolts and washers from the front tank mounting points. Install the tank bracket (1), using the supplied M6x45 (3) and M6x50 (4) bolts, place the M6 washers (2) underneath the bracket for support as shown in the picture on page 1. Tighten the bolts with a torque of approx. 5-9Nm/44-80Lbs.In/4.0-6.4Lbs.Ft. Place tank bracket part 2 (5) on part 1 (1) and use the 2 M6x16 bolts (6) to position and tighten with a torque of approx. 5-9Nm/44-80Lbs.In/4.0-6.4Lbs.Ft.

Step 3: installing the fork bracket assembly

Install the fork bracket using:

- Fork bracket (7)
- Washer M6 \varnothing 12 (8)
- 1x O-Ring (9)
- Tube Clamp TYPE 3 (10)
- Bolt M6x25 Low head (11)

Loosen and remove the steering stem nut, using a 32mm key. Remove the original washer. Place the assembly over the thread and position it using the bottom edge. Replace the nut on top of the forkclamp and tighten carefully with a torque of approx. 55-75Nm/486-663Lbs.In/40-55Lbs.Ft.

Put the assembly together as shown on page 1: On the fork bracket (7), place the washer (8), the O-ring (9) and the tube clamp (10) inline on top of the M6 hole and put the M6 bolt (11) through all the parts and screw it into the thread of the bracket. Tighten the bolt with a torque of approx. 5-9Nm/44-80Lbs.In/4.0-6.4Lbs.Ft.

Check the clearance of the bracket when steering from left to right, movement should be free!

Step 4: installing the steering damper

Install the steering damper using:

- Bolt M8x30 button head (12)
- Steering damper, stroke 75 (13)
- 1x O-ring (14)
- Washer M8 \varnothing 21 h4 (15)

Ensure that the clamp bolt of the Tube clamp is pointing forward. Shove the damper (13), with the end knob-side first, through the clamp until the damper body is fully against the clamp (10), then tighten the M6 clamp bolt (10a) with a torque of approx. 6Nm/53Lbs.In/4.4Lbs.Ft. Use the M8 bolt (12), O-ring (14) and washer (15) to fixate the balljoint to the tank bracket and tighten with a torque of approx. 14-17Nm/124-150Lbs.In/10.3-12.5Lbs.Ft.

Check if the damper is level horizontally and aligned to the bike.

Check if the damper does not touch anything when steering from left to right.

Check if the bike can make it's full steering angle from left to right.
